

BALLY XENON PINBALL LIGHT BAFFLE SET

Thank you for purchasing my Bally Xenon light baffle kit. This kit is designed to work with your machine without any un-reversible modifications so at any time you can revert back to a factory layout if you wish.

Installation is easy and all you need is some time and a 1/4" nut driver. All existing fasteners are reused and nothing new is required. Open your kit and group like parts together. You will have the following

After Grouping the items refer to the back of this page to see the locations of each baffle. Simply unscrew the existing fastener and install the baffle. Do not overtighten the fasteners when reinstalling.

The baffle noted as "F" goes on the top side. Remove the right plastic over the drop targets and unscrew the two (2) white posts that are closest to the wood rail. Install the baffle and secure back into position by reusing the two screws that were just removed. This baffle stops the light bleed back behind the drops and better lights the number values that are printed on the plastic.
